

SONG & ARRANGEMENT

Tracks That Drift

CHAIN LENGTH

- Each track loops its own chains at the first empty “--”
- Chains of different lengths drift apart for polymeters
- Keep a silent track aligned with a chain of silent phrases

Remix a Pattern

RMX

- Put RMX XY on a control track to the right of your pattern
- X picks affected tracks; Y picks the phrase row to jump to
- Try rows 0, 4, 8, C for rearranged beats; use FX help for X

One Phrase, Many Keys

CHAIN TSP

- The chain's TSP column transposes each phrase in semitones
- Reuse one bassline for a whole progression
- Turn TRANSP. off on drum instruments so they stay put

Layer Instruments

NXT

- NXT XX plays instrument XX on the track to the right
- It shares the note and velocity; reserve that track for it
- Layer a bass with a click or bright attack; not on track 8

Custom & Microtonal Scales

SCALE VIEW

- Load one of 92 factory scales from /Scales/Factory
- Toggle notes with EN; detune any note ±24 semitones
- SCA assigns a scale and key per track, SCG for all

LIVE PERFORMANCE

Live Mode Jams

SHIFT + LEFT

- From Song view, SHIFT + LEFT enters live mode
- PLAY cues a chain per track; SHIFT + PLAY stops a track
- LIVE QUANTIZE in Project view sets when cues start

Mute & Solo Moves

OPT + SHIFT

- OPTION + SHIFT mutes, OPTION + PLAY solos
- Release OPTION first to latch the mute or solo
- OPTION + LEFT/RIGHT solos every track on that side
- OPTION + SHIFT + PLAY clears them all for the drop

Tweak, Then Undo

SNAPSHOT

- Mixer view: SHIFT + OPTION stores a song snapshot
- Mangle freely, then SHIFT + EDIT recalls it

Drop Changes on the Beat

PROJECT

- TRANSP. GROOVE and SCALE apply when EDIT is released
- Dial in the value, then release EDIT on the downbeat
- Tap EDIT in rhythm on TEMPO to set the tempo by tapping

RHYTHM & GROOVE

Swing Only the Hats

GRV

- Groove 01: alternate rows 07, 05 (SHIFT + UP from Phrase)
- Put GRV 01 on the hat track; others stay on groove 00
- Higher PPQN gives finer timing; adjust tick counts to match

Ghost Notes & Fills

CHA · NTH · SED

- CHA 8F plays the note about half the time (CHA 1F ≈ 10%)
- NTH skips hits by loop count; read its on-screen help
- SED at a section start makes the chances repeat each pass

Rolls & Ratchets

RET

- RET 03 retriggers every 3 ticks (32nds); RET 02 is faster
- First digit ramps volume: 1–7 fades, 9–F swells
- RET 30 plays a single repeat after 3 ticks (a flam)

Human Feel

DEL · MTT · RND

- DEL 03 delays 3 ticks: half a step in the default groove
- MTT nudges by 1/8 tick; 80–FF is early (not on row 0)
- VOL, then RND with a small range varies each hit

MIX & MASTER

Sidechain Pump

TRIG ENV

- On the pad or bass: a MOD slot → TRIG ENV, DEST volume
- SRC 80–87 picks the kick's track (80 is track 1)
- Negative AMT ducks on each kick; DEC sets the recovery

Dub Throw

SDL

- SDL FF on one hit, then SDL 00 on the next step
- Effect Settings (Mixer, SHIFT + DOWN): TIME 40 = 4 beats
- High FEEDBACK lets the throw trail off

Build-Up Sweep

DJC · DJT

- DJ filter: 80 is off, lower is low-pass, higher is high-pass
- DJC then REP ramps it each step; RTO sets where it stops
- TYPE switches to band-stop modes; DJR adds resonance

Freeze a Reverb Tail

XRZ

- Send a chord to reverb; XRZ 01 on a later row freezes its tail
- Hold it under a breakdown; XRZ 00 releases the freeze

Glue the Mix

OTT · LIM

- Mixer OTT from 00 to 80 blends in parallel multiband squash
- LIM above 00 engages the master limiter; watch the scope
- SOFT CLIP in the scope view (EDIT on LIM) tames harsh peaks

Drums Animate a Pad

TRIG ENV

- Pad: TRIG ENV → CUTOFF; SRC 80–87 picks the drum track
- Low cutoff, positive AMT, short DEC: each hit opens the pad

TABLES

Looping Arp

N · HOP 00

- N column rows 0–3: 00, 04, 07, 0C (a major arpeggio)
- HOP 00 on row 4 loops it; TABLE TIC sets the speed
- Plucky sounds: RET 10 on the rows so each note re-strikes

Change Each Hit

TIC 00

- TABLE TIC 00 moves the table one row per note
- Put different CUT or PAN values down the rows
- HOP 00 after the last used row cycles the pattern

Drum Kit on One Track

TIC FE · INS

- TIC FE: the note picks the row (C is row 0, C# row 1, ...)
- INS on each row selects the kick, snare, or hat instrument
- HOP 00 on row 0C repeats the 12-note kit across octaves

Trance Gate

V COLUMN

- Table V column: alternate loud and silent rows (FF, 00, ...)
- HOP 00 at the end loops it; TABLE TIC sets the gate rate

Custom LFO Shapes

CUT · HOP

- Relative FX add offsets, not targets: 01 adds 1, FF subtracts 1
- For a CUT rise and fall, balance positive and negative offsets
- HOP 00 loops it; tables also loop at the bottom by default

Columns at Different Speeds

TIC IN TABLE

- TIC inside a table sets the rate for that FX column only
- Loop columns at different lengths for shifting motion

A Second Table per Note

TBX

- TBX XX in a phrase runs table XX alongside the instrument's table
- TIC on the same row sets its speed; THO there hops into it
- TBX 00 stops it

Octave & Velocity Maps

TIC FC · FD

- TIC FC: the octave picks the row; TIC FD: the velocity does
- INS per row switches sounds by octave or velocity

Random Notes & Accents

CHA · RNL

- CHA in a table sets odds for everything left of it (00–FF)
- RNL in the first FX column randomizes note and velocity

Repeat, Then Move On

HOP 30

- HOP XY in a table jumps to row Y, X times, then carries on
- Rows 0–3 an arp; HOP 30 on row 4 jumps back three times
- Rows 5 and up can fade it out or switch to a new pattern
