

MACROSYNTH

808 Kick

SHAPE KICK

- SHAPE → KICK: TIMBRE sets decay, COLOR sets tone
- The note tunes the drum, so pick one in the song's key
- Raise AMP with LIM set to SIN for extra weight

Snare & Hats

SNARE · CYMBAL

- SNARE: TIMBRE is tone, COLOR is snappy noise
- CYMBAL: COLOR blends metal and noise, TIMBRE is brightness
- Short AHD on volume for closed hats; KIL 02 cuts tighter

Plucked Lead

SHAPE PLUCKED

- TIMBRE is damping (length), COLOR is pluck position
- Very low notes turn it into knocks and wood percussion
- Add a DEL send and PSL slides for a guitar-like line

Chords on One Track

WAV PARAPHONIC

- Four voices: COLOR picks the chord, TIMBRE morphs the wave
- COL in the phrase changes the chord per step
- COLOR 00 stacks unison voices for a thick detuned lead

FM SYNTH

Punchy FM Kick

DRUM ENV

- One SIN carrier at RATIO 1.00, other operators at LEV 00
- MOD1 → DRUM ENV with a high PEAK and short BODY
- In the carrier's MOD slot, route MOD1 to PIT
- MOD2 → AHD on volume; DEC sets the kick's length

Growling Bass

RATIO · LEV/FB

- Carrier RATIO 1.00; modulator 1.00 or 2.00 (0.50 for a sub)
- Modulator LEV sets brightness, FB adds grit
- Short AHD on the modulator's LEV slot for a plucky attack

HYPERSYNTH

Lush Pad

SWARM · WIDTH

- CHORD: pick a bank and set its intervals (e.g. 0, 4, 7)
- SWARM detunes the saws; WIDTH toward FF spreads them
- ADSR on volume, slow ATK and long REL; end notes with OFF

Bass + Chord Stab

SUBOSC · SHIFT

- SUBOSC below 80 is two octaves down, above 80 is one
- Low CUTOFF and a short AHD on it for a stab
- An LFO on SHIFT fades between intervals 1–3 and 4–6

SAMPLER

Chop a Break

SLICE

- Sample editor: PROCESS → SLICE:AUTO (transients) or SLICE:16
- SAVE, then set the instrument's SLICE to 01 FILE
- Notes from C-1 up play slices in order; rearrange freely

Lazy Chop

PLAY + EDIT

- In the editor, highlight SLICE MARKER and play the sample
- Tap PLAY + EDIT on each hit to drop a marker there
- SAVE, set SLICE to 01 FILE, and play the slices from C-1

Loops in Tempo

REPITCH/BPM

- PLAY → REPITCH/BPM, then set STEPS/BPM to the loop's length
- The loop follows the song tempo (pitch moves with it)
- OSC play modes ignore START, for sustained tones

Resample & Mangle

EDIT ×2

- Song view: SHIFT + OPTION to select, then double-tap EDIT
- QUICK RENDER makes a new sampler instrument
- REVERSE, SQUISH(OTT) or DOWNSAMPLE it in the editor

RHYTHM & GROOVE

Swing Only the Hats

GRV

- Groove view (SHIFT + UP from a phrase): make groove 01 07 05
- Put GRV 01 on the hat track; others stay on groove 00
- Subtler swing: raise the groove's PPQN to 48–192

Ghost Notes & Fills

CHA · NTH · SED

- CHA 8F plays the note about half the time (CHA 1F ≈ 10%)
- NTH skips hits by loop count; read its on-screen help
- SED at a section start makes the chances repeat each pass

Rolls & Ratchets

RET

- RET 03 retriggers every 3 ticks (32nds); RET 02 is faster
- First digit ramps volume: 1–7 fades, 9–F swells
- RET 30 plays a single repeat after 3 ticks (a flam)

Human Feel

DEL · MTT · RND

- DEL 03 pushes a row half a step late (6 ticks = 1 step)
- MTT nudges by 1/8 tick; 80–FF is early (not on row 0)
- VOL, then RND with a small range varies each hit

★ STYLE STARTERS

TPO 80

Techno · 128
808 Kick + Sidechain Pump + Dub Throw

TPO AA

Jungle · 170
Chop a Break + Rolls + Growling Bass

TPO 5A

Lo-Fi · 90
Swing + Resample (DOWNSAMPLE) + LIM SIN

TPO 46

Ambient · 70
Lush Pad + Ghost Notes + DRUNK LFO on cutoff

TABLES

Looping Arp

N · HOP 00

- N column rows 0–3: 00, 04, 07, 0C (a major arpeggio)
- HOP 00 on row 4 loops it; TABLE TIC sets the speed
- Plucky sounds: RET 10 on the rows so each note re-strikes

Change Each Hit

TIC 00

- TABLE TIC 00 moves the table one row per note
- Put different CUT or PAN values down the rows
- HOP 00 after the last used row cycles the pattern

Drum Kit on One Track

TIC FE · INS

- TIC FE: the note picks the row (C is row 0, C# row 1, ...)
- INS on each row selects the kick, snare, or hat instrument
- Program the whole beat by note name on a single track

Trance Gate

V COLUMN

- Table V column: alternate loud and silent rows (FF, 00, ...)
- HOP 00 at the end loops it; TABLE TIC sets the gate rate
- Works on any held pad or chord

MIX & FX

Sidechain Pump

TRIG ENV

- On the pad or bass: a MOD slot → TRIG ENV, DEST volume
- SRC 80–87 picks the kick's track (80 is track 1)
- Negative AMT ducks on each kick; DEC sets the recovery

Dub Throw

SDL

- Keep the instrument's DEL send low for the groove
- SDL FF on one hit, then SDL 00 on the next step
- Long delay feedback lets the throw trail off

Build-Up Sweep

DJC · REP

- DJC to start the DJ filter, then REP ramps it each tick
- RTO sets where the ramp stops; DJR adds resonance

Carve Space

EQ

- Instrument EQ: pick a slot, then EDIT opens the EQ editor
- Cut lows from pads and hats so the kick and bass stay clear

Grit & Warmth

AMP · LIM

- Raise AMP: LIM SIN is soft, FOLD and WRAP are aggressive
- POST:AD soft-clips after the filter for analog drive
